

CONTENT FILTER MAKO GUARDIAN

Control Web Browsing Minimise Your Employer Risk.

You decide what web content is appropriate.

What is the Mako® Guardian® service?

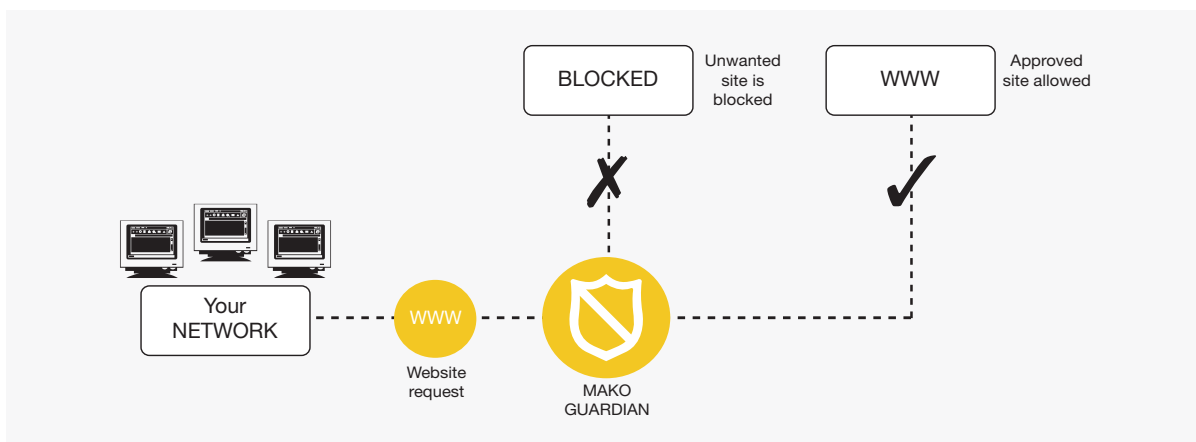

Mako Guardian is an active web content filtering and sanitisation service that gives you total control over the web content that is allowed into your network. With Mako Guardian you can meet the legal requirements to control access to objectionable or inappropriate Web sites.

Mako Guardian runs on the 6086-Series Makos and restores employee productivity lost through non-business related web browsing. Mako Guardian empowers you to quickly and easily manage access to web content from anywhere in the world using the Mako Networks Central Management System. If you aren't sure about what type of filtering you should have in your business, start with the default settings and customise to your own requirements.

Mako Guardian empowers you to enforce your acceptable use policy and protect your business from legal liabilities that could arise from Internet mis-use.

Filter By:

- SITE CATEGORIES – select pre-defined site categories to block or allow.
- CUSTOM CATEGORIES – create your own Site Categories specific to your business.
- PHRASE CATEGORIES – select different pre-defined phrase types or groups to block.
- CUSTOM PHRASES – create your own phrase categories.
- FILE TYPES – choose which file and MIME types you want to block from being downloaded from the web.
- ICRA – choose to block by Internet Content Rating Association tags.
- EXCEPTIONS – specify individual ip addresses on your network that are allowed to bypass content filtering.
- SPYWARE SITES– automatically block access to some of the most dangerous sources of Spyware.

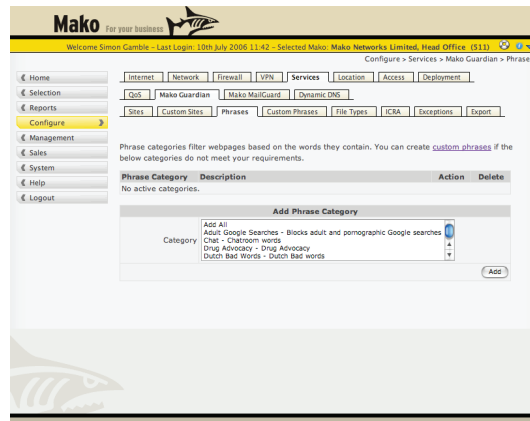

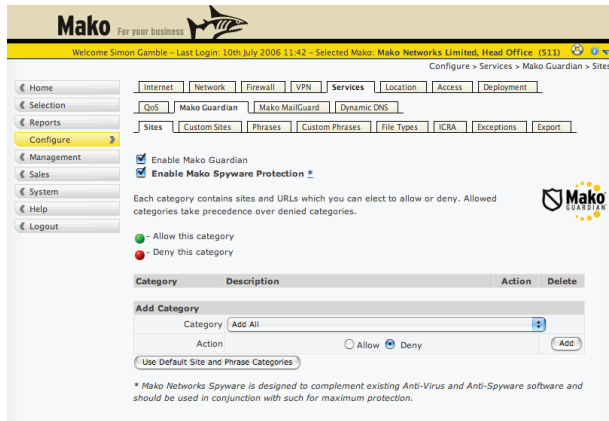

Mako Guardian requires no additional hardware.

Management Console Mako Guardian

Mako Guardian Management

Once setup is completed, Mako Guardian controls access to Internet content without any user interaction required. Mako Guardian is managed through the Mako Networks Central Management System, accessible through a web browser from anywhere in the world – providing the flexibility to tailor your policies on demand. Unauthorised Site Lists are automatically uploaded to your Mako and kept up to date for you. You choose exactly what you want to allow and what you want to deny on your network.

Features

- Can Filter text and HTML pages for obscene (sexual, racial, violent, etc) content
- Uses an advanced phrase weighting system to reduce over or under blocking
- Can filter sites using the ICRA labeling system (see <http://www.icra.org>)
- Can filter according to MIME type and file extension
- Can filter according to URLs
- Can block all IP based URLs
- Uses an intelligent algorithm to match phrases in web pages mixed in with HTML code and white space
- Big5, Unicode and top-bit set characters can be used in search phrases
- Is able to block sites when users try using the IP address of the site instead
- IP Exemptions allow you to choose which computers are excluded from the filtering rules
